

Glossary

<i>Allergic Reactance</i>	If this is a significant part of the total reactance in an individual reactance test then the item may currently have an allergic tendency
<i>Allersode</i>	Energetic pattern of food, inhalant etc. at the sensitising potency of 30C.
<i>Body Capacitance</i>	The ratio of charge to potential, being an indicator of the body's energy storing characteristics
<i>Calibration</i>	The initial process of establishing interface with the client, where the clients optimum reactivity response (time of exposure) is established to a variety of items (approximately 20) ranging from the innocuous to the toxic
<i>Coherence</i>	A measurement of the percentage of how close the return signal is to the original input signal. Generally increases if there is a harmonic reaction of the client, with numbers above 75 indicating a positive reaction
<i>Combination remedies</i>	See NV and DR
<i>Dark Field</i>	A method of viewing blood for disturbances under a specialised microscope system
<i>DR Combination Remedies</i>	Doctor Recommends practitioner remedy range of homeopathics, developed by W. Nelson. Visit www.qxcisubspace.com or fax Dr C Sirbu at QX on ++36 1 210 9340
<i>ECG</i>	Electro Cardiograph (indication of heart activity)
<i>EEG</i>	Electro Encephalo Graph (indication of brainwave activity)
<i>EPR</i>	Electro Physiological Reactivity
<i>FE</i>	See Flower Essences
<i>Floating</i>	Each time a screen is entered a retest of the item occurs. The basis is that some interactions are quantic and do not repeat
<i>Flower essence.</i>	These specifically reflect mental-emotional-spiritual aspects and generally have a higher vibration than more physically oriented remedies. Other remedies may also have a mental-emotional-spiritual association in addition to their physical association.
<i>Fourier Number</i>	Mathematical relationship number of the resulting seven part harmonic dissection. There is a complicated mathematical comp set which is presented at various places in the QX but for which no correlative information currently exists
<i>Good Food</i>	There is no such thing, there is only food. The client reaction makes it good or otherwise
<i>Homeopathic Imponderable</i>	See Imponderable
<i>Hyperreactivity</i>	Clients body energetic is reacting too quickly

<i>Hyporeactivity</i>	Clients body energetic is weakly reacting
<i>Impedance</i>	The ability of a medium to conduct current, being the ratio of an induced voltage to injected current in a conductive media and having the two components of resistance and reactance
<i>Imponderable</i>	A non physical energetic pattern. They include emotions, geopathics..essentially anything that is not substantial. Anger imponderables are prepared by a number of people holding a container of diatomaceous earth (a carrier for energy patterns like water) and putting angry thoughts into this.
<i>Interface Value (Calibration)</i>	Indicative of an accuracy of interface facilitating the testing of the majority of patients. At 98% 1 in 50 could be tested, at 95% 1 in 20, at 90% 1 in 100. At 85%, nominal target in the QX test process, 49 out of 50 can be tested
<i>Isode</i>	Energetic pattern of material
<i>Major Resonant Frequency</i>	The predominant frequency of the clients energetic body
<i>Muscle Disturbance</i>	A high number indicates a disturbance but not necessarily intrinsic in the tissue. Especially if the sarcode resonance is sound then there is likely to be a secondary external source
<i>Muscle Tension</i>	Shows in certain sarcode tests, the higher number indicating a higher tension or tightness. Can indicate a tendency to spasm
<i>Nosode</i>	Energetic pattern of disease tissue or pathogens
<i>NV Combination remedies</i>	New Vista Remedy range of Homeopathics developed by W. Nelson. Visit www.qxcisubspace.com or fax Dr C Sirbu at QX on ++36 1 210 9340
<i>Phase Angle</i>	Time delay between a stimulating current and the voltage generated by an alternating current of 50 KHZ in the conductive media, expressed in degrees of phase shift. One complete cycle of current represents 360 degrees, so a phase shift of 6 degrees represents a shift of 6/360ths of a cycle or 1.67%
<i>Phase Contrast</i>	A method of viewing blood for disturbances under a specialised microscope system
<i>Proton Pressure</i>	An indication of the pressure exerted by the proton content of the clients body electric. Normal target is 65 to 70. Below 65 is considered acidic and above 70 alkaline. There is no correlation between this body electric measurement and urine, saliva, other body fluids
<i>Purple Colour Band</i>	Items that the client has a reactivity to of more than two standard deviations from the mean reactivity
<i>QMCI</i>	Quantum Medical Consciousness Interface
<i>QXCI</i>	Quantum Xrroid Consciousness Interface
<i>Reactance</i>	The component of impedance related to the storage of energy in a conductive media

<i>Reactance Speed Index</i>	The number of times that the QX has had to adjust the testing speed downwards in order to get an optimum reaction from the clients body electric
<i>Reactivity</i>	The client energetic response resulting in a score relating to the significance that a client may place on an item after an exposure of between 1/80 th and 1/100 th of a second
<i>Reactivity Dysfunction</i>	See hypo/hyperreactivity above
<i>Rectified</i>	An indication that an energetic disturbance has been repaired according to the way the QX measures. It does not indicate how long this rectification will hold
<i>Red Value Colour Band</i>	Reflect items that the client has a high reactivity to of three or more standard deviations from the mean reactivity
<i>Resistance</i>	The component of impedance related to the dissipation of energy in a conductive media
<i>Resonance</i>	The patient reactivity to an item after 1 second exposure. Indicative of ongoing significance of an item
<i>Sarcode</i>	Energetic pattern of healthy tissue
<i>Sarcode Resonance</i>	Indicates how much resonance there is to a healthy energetic pattern. High values indicate over functioning, too much energy, probably healthy but stressed from outside source. Below 50 indicates under functioning, too little energy, with a possibility of unhealthy or disturbed tissue
<i>SCIO</i>	The name given to the 2002 development of the QXCI, from the root scio to no
<i>Selye Stress Scale</i>	A stress scale rating that indicates where the client body electric is in terms of alarm, adaptation and exhaustion
<i>SOC</i>	Suppression and obstruction to cure, as calculated in the demographics panel
<i>Stabilised Value</i>	The value is held from the original test and does not change, despite changes in the client in the body electric. All items in the main test matrix are stabilised items. Items in individual screens may not be stabilised and may be floating items
<i>Test Matrix Item</i>	These are energetic patterns of substances, prepared as a homeopathic prior to measurement of their energetic characteristics in an electrical way
<i>Trivector</i>	The description given to the three dimensional electrical holograph that is used in the QX to characterise the body electric comprising resistance (conductance), static (capacitance, amperage), magnetic (inductance, voltage).
<i>Yellow Colour Band</i>	Items that the client has a reactivity of more than one standard deviation from the mean reactivity
<i>Xrroid</i>	The name coined by QX for the reactivity testing employed
